PRESS RELEASE

Tele2 and foodora accelerate testing of the 5G connected Q-commerce robot Doora

This week, Q-commerce company foodora and telecom operator Tele2 continue testing home deliveries with 5G technology in central Stockholm. In this next step, the robot "Doora" will begin making food deliveries to a test group of customers, which means that autonomous home deliveries are within reach.

Now the second phase of testing self-driving food deliveries in central Stockholm with the Q-commerce robot "Doora" begins. The first phase in mid-March began with letting Doora roll on the streets of Stockholm, with the autonomous robot being analyzed for its ability to work around objects and passers-by. Doora also underwent tests around handling pedestrian crossings and curbs.

In the next phase, which begins today, the tests continue with Doora delivering orders to customers via the foodora platform. foodora will analyze how well Doora works during collection and delivery, as well as collect feedback from partners and customers for the development of the service.

- The first test with Doora exceeded expectations. Working with partners who are innovative and work quickly like us, is a good recipe. My hope for this week's tests is that we can soon start using the technology of the future with foodora, and that Doora can become a common sight on the streets of Sweden, as we have other similar projects that will soon be launched, says John Denbratt, Chief Logistics Officer foodora

- As we prepare for the expansion of 5G in Sweden, we are working in parallel with several other exciting projects where we look at how we can take advantage of the full potential of 5G. This project that we are now doing together with foodora is clearly one of the most exciting and we will be able to use the concept when we look at other industries and areas of use, says Stefan Trampus, Executive Vice President, Tele2 B2B and IoT

By being connected to Tele2's 5G network, the Doora robot can perceive its surroundings, communicate and thus create a situation-adapted service: autonomou home deliveries. Doora has a camera that sends real-time information to foodora, which can track and trace the robot and quickly send data to and from Doora.

Internet of Things (IoT) is a concept now being applied to Swedish home deliveries. IoT means that machines, vehicles, household appliances, and other things are equipped with built-in connected sensors and processors. foodora predicts that the number of home deliveries will increase significantly in the future, which is why foodora is constantly working to find smoother and better solutions adapted to the needs of the future.

Facts about the test

The Q-commerce droid Doora will be tested around Stureplan today and tomorrow and can transport both food and other products weighing up to 20 kg. The plan is that the pilot together with two players will continue in the spring.

Facts about Doora

Speed: 6 km / h
Connection: 5G
Battery life: 8h
Charging time: 4h
Manufacturer: Yape
Delivery cost for customer: free delivery

About foodora

foodora is the largest q-commerce company in the Nordic. A market place that has thousands of affiliated restaurants and shops. The owner of foodora is Delivery Hero, which operates in 50 different markets around the world.

About Q-commerce

Q-commerce (Quick Commerce) is third-generation digital commerce. Launched by foodora in May 2020, Q-commerce means customers can, in addition to restaurant food, also have beauty products, books, and technology delivered to their home in q-speed, within 30 minutes.

Tele2's vision is to be *the smartest telco in the world, creating a society of unlimited possibilities*. Ever since Tele2 was founded in 1993, we have continued to challenge prevailing norms and dusty monopolies. Today, our award winning networks enable mobile and fixed connectivity, telephony, data network services, TV, streaming and global IoT solutions for millions of customers. We drive growth through customer satisfaction and smart combined offerings. Tele2 has been listed on Nasdaq Stockholm since 1996. In 2020, Tele2 generated revenue of SEK 27 billion and reported an underlying EBITDAaL of SEK 9 billion. For latest news and definitions of measures, please see our homepage www.tele2.com.
