PRESS RELEASE

Tele2 Joins AWS Partner Network to Deploy Cloud Services to Customers Across Nordics and Baltics

Stockholm – Tele2 AB (“Tele2”) (Nasdaq Stockholm: TEL2 A and TEL2 B) today announced a collaboration with Amazon Web Services (AWS) to enhance the cloud services and cloud management portfolio that Tele 2 offers its customers to enable fast and flexible access to the cloud. Tele2 will leverage AWS cloud capabilities to support growing customer needs in the public sector and across different industry verticals and will assist them with digitalization of processes to enable optimized manufacturing, efficient distribution and improved customer service experiences.

As part of the collaboration, Tele2 now joins the AWS Partner Network (APN). Tele2 will combine its advanced network and connectivity, security, encryption and managed services with the broad portfolio of secure AWS capabilities to create customer solutions tailored to specific sector needs for companies in the Nordic and Baltic region.

“Through this collaboration we will combine our high-performance communication and security with AWS cloud services, which will benefit our customers. This will also enable us to even better support our customers in the development of their business and for their digitalization journey”, says Stefan Trampus, Executive Vice President B2B at Tele2.

This collaboration builds on Tele2’s existing relationship with AWS, as Tele2 has been using the AWS cloud for its own enterprise IT transformation, leveraging compute, analytics, and database capabilities, for several years. The cloud developer community within Tele2 has gained vast experience in cloud application integration and security and Tele2 can now leverage that experience to create new customer offerings that seamlessly integrate its solutions with the AWS cloud.

“There is massive potential for organizations across the public and industry sectors to save costs, improve time to market and accelerate innovation through the elasticity and agility of the cloud. Through this collaboration with AWS, Tele2 is now even better equipped to help its customers across the Nordic and Baltic region accelerate that transformation and tap into new capabilities enabled through the intersection of 5G with edge cloud computing,” says Fabio Cerone, Director, Telecom Industry – EMEA at AWS.
